Manager  
Middleware BU

# REACTIVE MICROSERVICES

# The 2 faces of Reactive

Actor, Agent  
Autonomic  
Systems

Reactive

A software showing  
responses to stimuli

Data flow,  
Functional  
programming

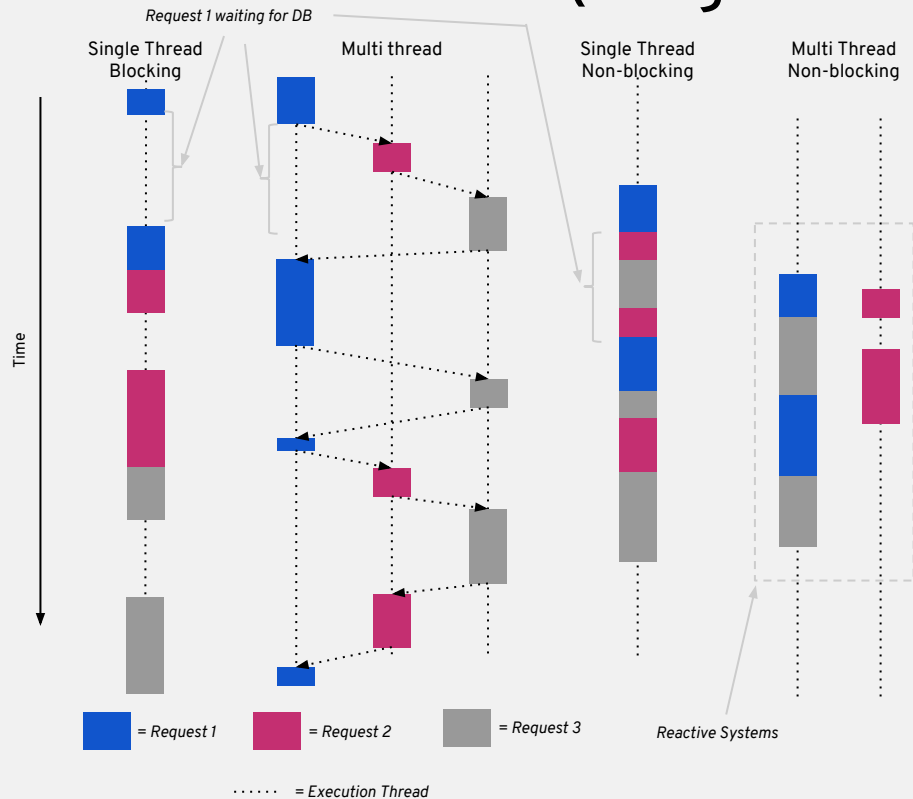

Reactive  
Systems

Reactive  
Programming

Akka, **Vert.x**

Reactor, RX, **Vert.x**

# Execution Model (single core)

## Blocking

- Example: CGI, early versions of server side JavaScript.
- Can only scale horizontally

## Multi thread

- Example: Java EE, Tomcat, Spring (non reactive)
- Scales horizontally and vertically

## Non blocking

- Example: NodeJS, Eclipse Vert.x, Akka, Spring reactive
- Scales horizontally and vertically

# Eclipse Vert.x

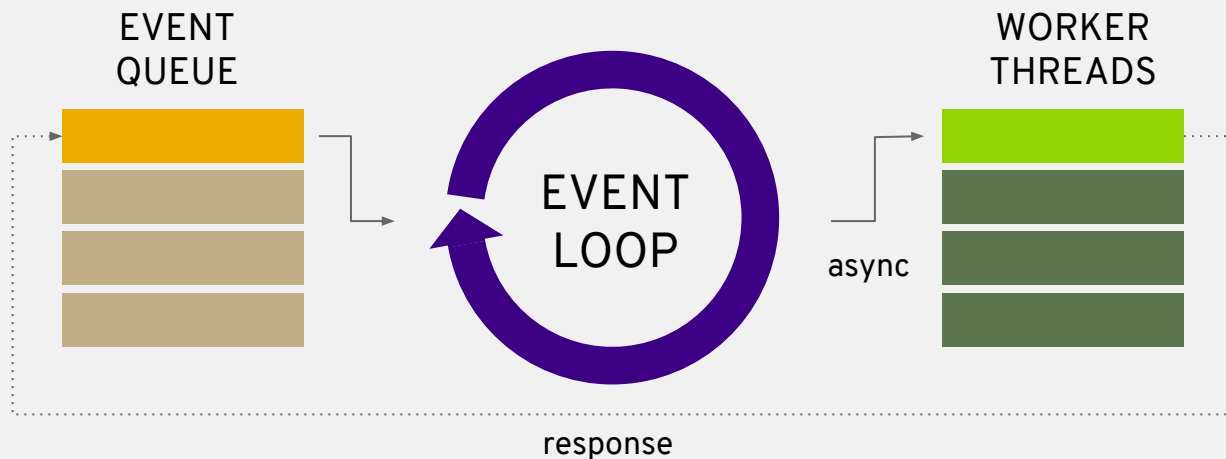

## Vert.x is a toolkit to build distributed and reactive systems

- **Asynchronous Non-Blocking development model**
- Simplified concurrency (**event loop**)
- Reactive microservice, Web applications, IOT
- Ideal high-volume, low-latency applications
- Un-opinionated
- Understands clustering in its core architecture

Home - <http://www.vertx.io>

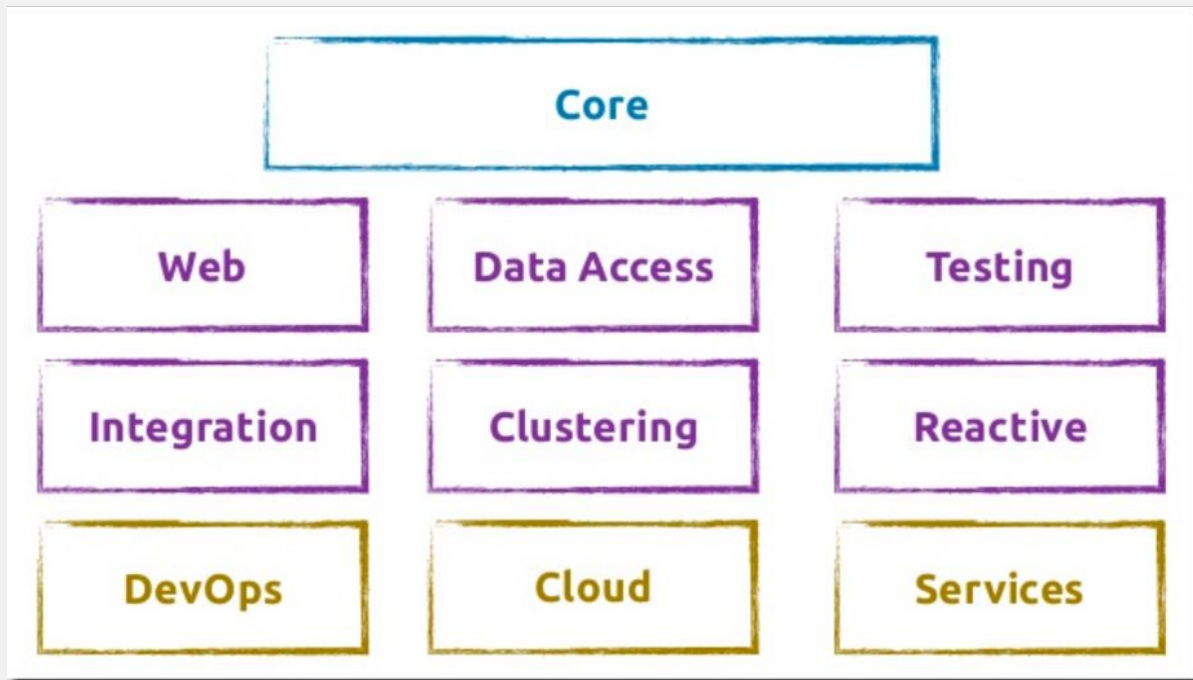

# VERT.X EVENT LOOP

Handle Thousands of Requests  
With Few Threads

# Vert.x Ecosystem

# LAB 4: Reactive Microservices with Eclipse Vert.x

- Explore Vert.x Maven project
- Create an API gateway
- Run Vert.x locally
- Deploy Vert.x on OpenShift

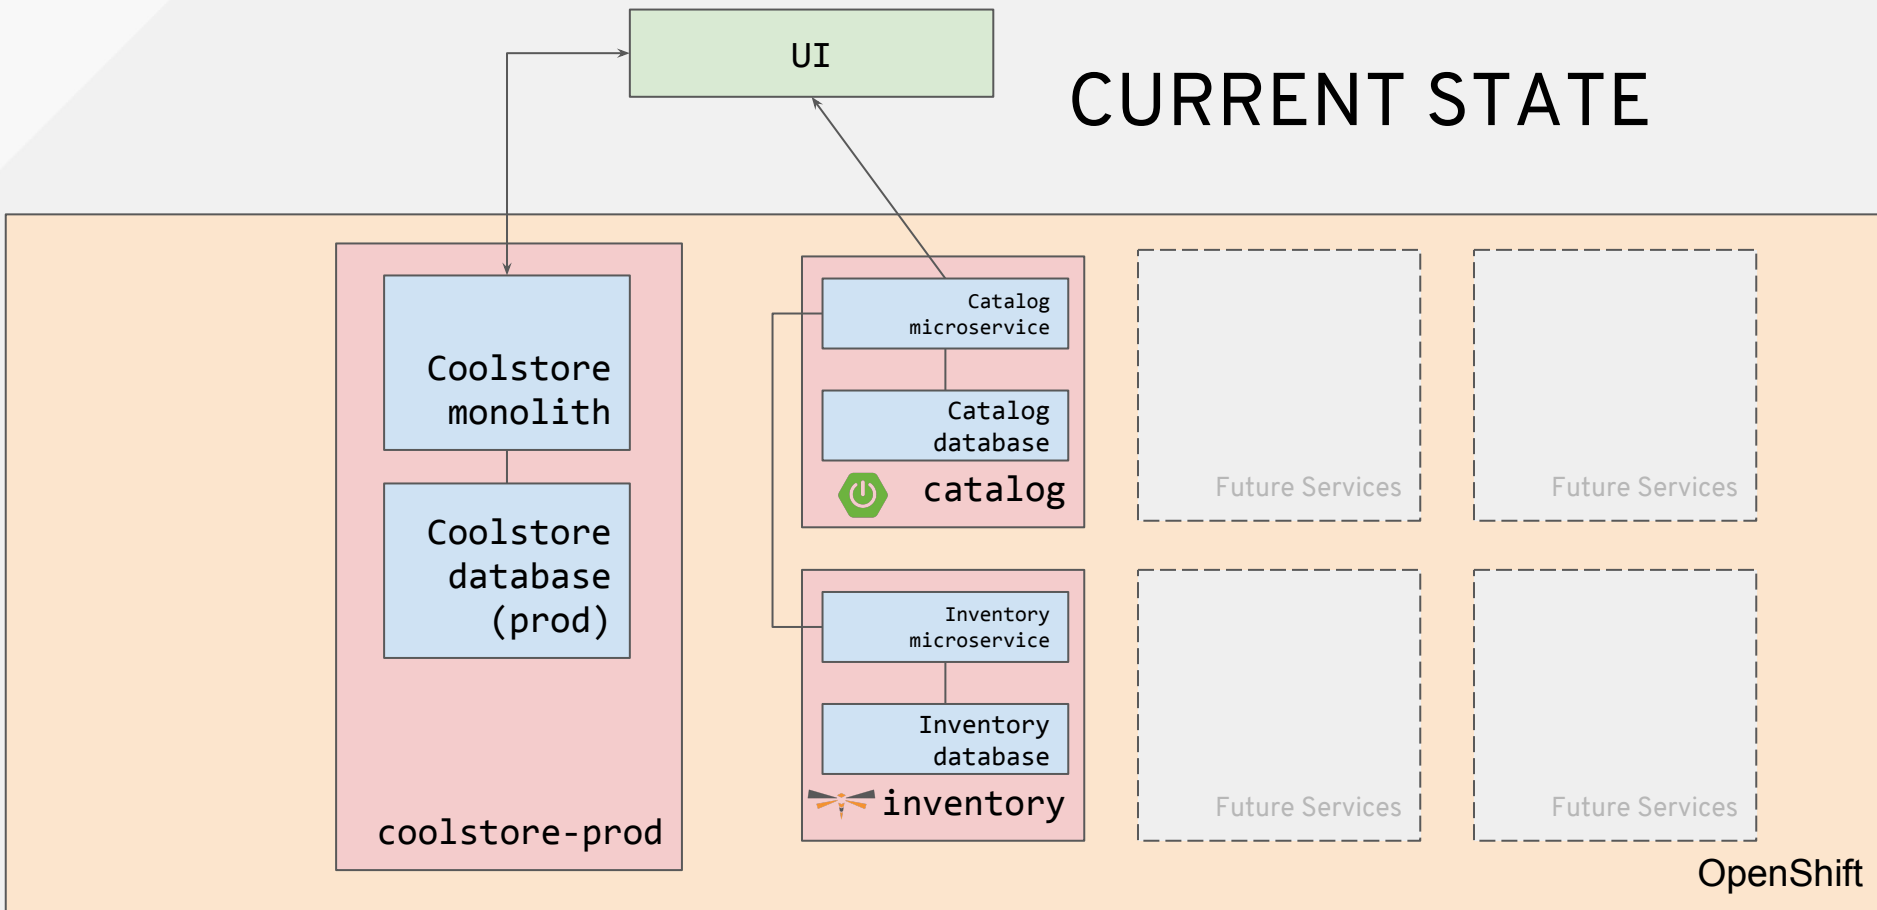

# LAB: REACTIVE MICROSERVICES WITH ECLIPSE VERT.X

# GOAL FOR LAB

In this lab you will learn:

- How Event-based architectures supercharge microservice apps
- Use cases for reactive applications
- Develop microservices using Eclipse Vert.x
- Interact with other microservices without blocking
- Learn the basics of Reactive programming

# CURRENT STATE

# LAB: REACTIVE MICROSERVICES

A man with wild white hair, wearing a white lab coat and green-tinted goggles, is holding two pairs of pliers. He is looking intently at the camera. The background is a workshop or lab with various tools and equipment. A dark semi-transparent banner at the top contains the title 'LAB: REACTIVE MICROSERVICES' in white. A similar banner at the bottom contains the text 'SCENARIO 6 BUILDING REACTIVE MICROSERVICES'.

SCENARIO 6 BUILDING REACTIVE MICROSERVICES

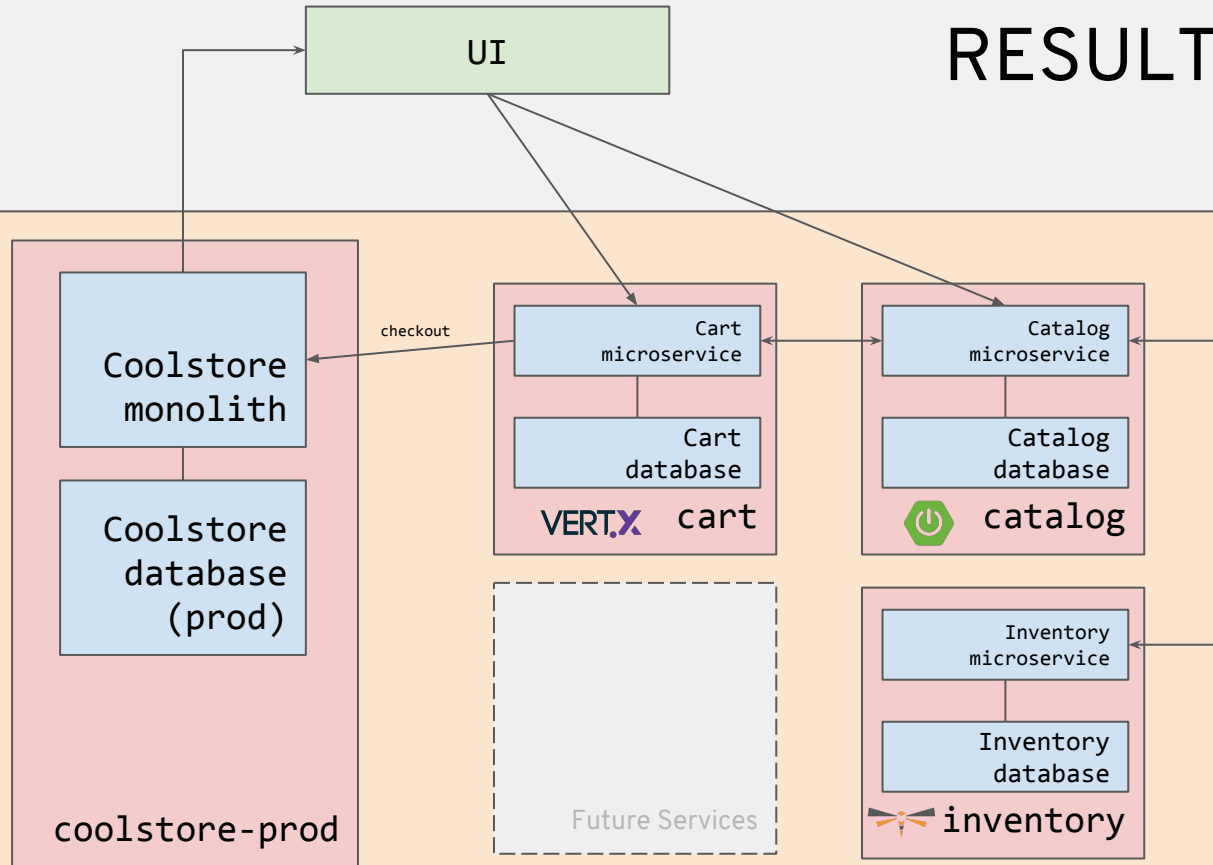

# WRAP-UP AND DISCUSSION

# RESULT OF LAB

In this lab you learned how to:

- Build reactive web application that are non-blocking
- Asynchronously call out to external service using Callbacks, Handlers and Futures
- Deploy the application to OpenShift

# RESULT OF LAB

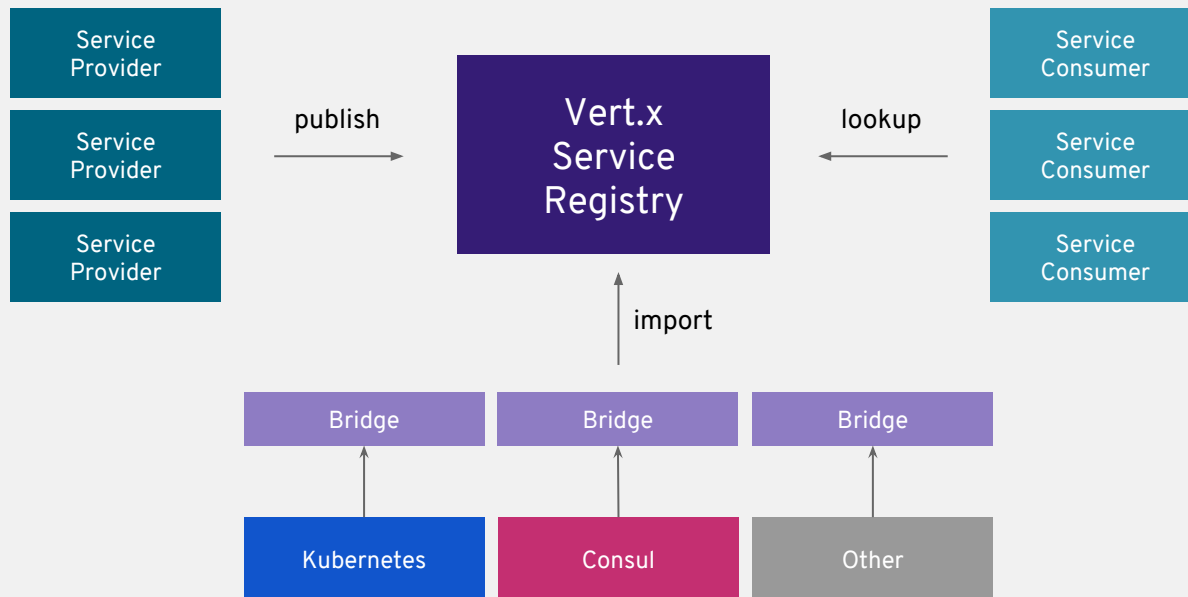

OpenShift

**ECLIPSE VERT.X OFFER MUCH MORE**

# SERVICE DISCOVERY

# Vert.x vs NodeJS

## Vert.x

- Multi-threaded
- Polyglot (Java, JavaScript, Scala, and more)
- Supports reactive programming using RxJava, RxJS, etc

## NodeJS

- Single threaded
- JavaScript only
- Support reactive programming using RxJS
