CLOUD-NATIVE CAPABILITIES WITH RED HAT OPENSIFT

ANY
CONTAINER

ANY
INFRASTRUCTURE

A container is the smallest compute unit

CONTAINER

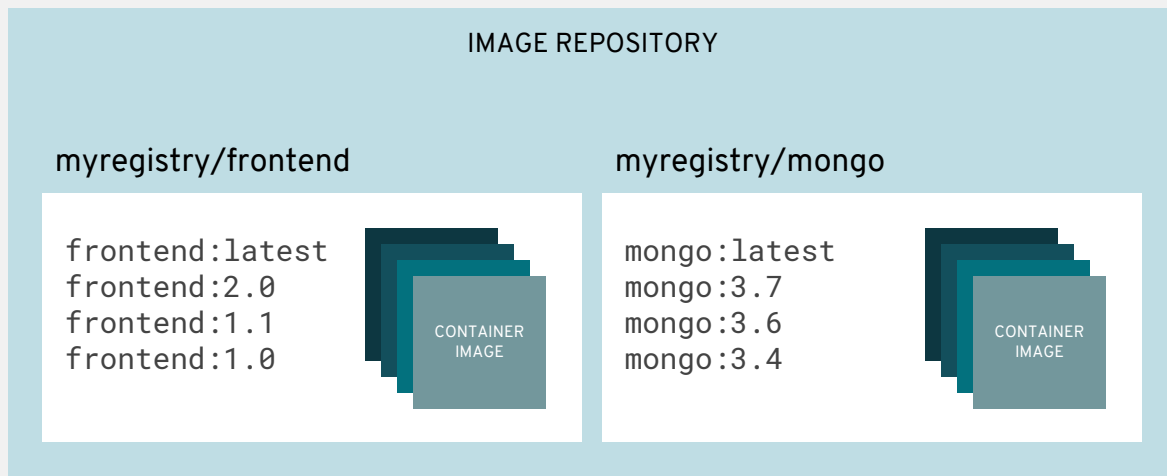

containers are created from
container images during a build

container images are stored in
an image registry

an image repository contains all versions of an image in the image registry

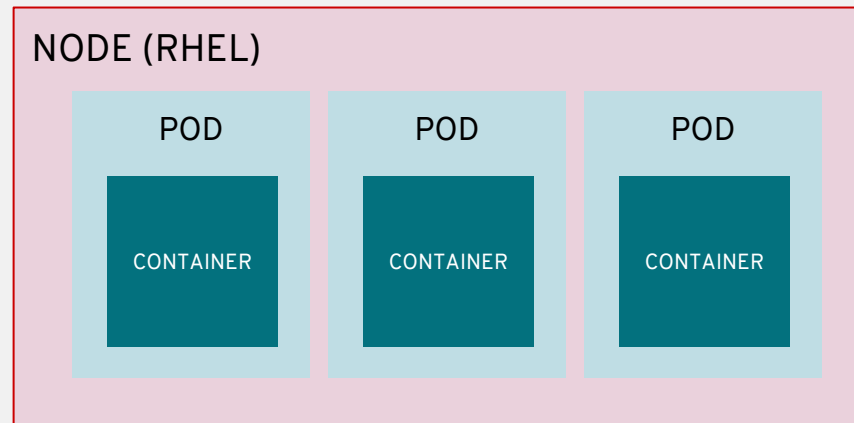

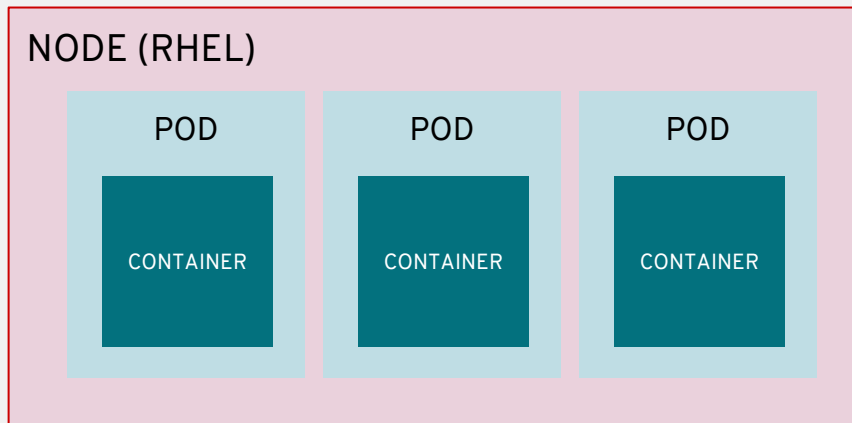

containers are wrapped in pods which are units of deployment and management, and share a common network address

Pods configuration is defined in a deployment

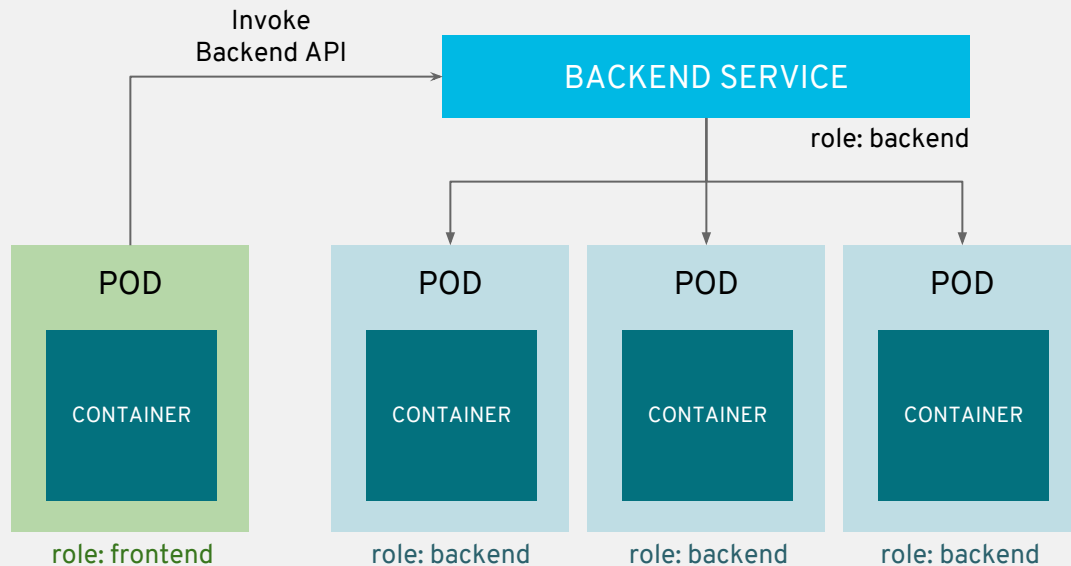

pods are deployed to and run on nodes

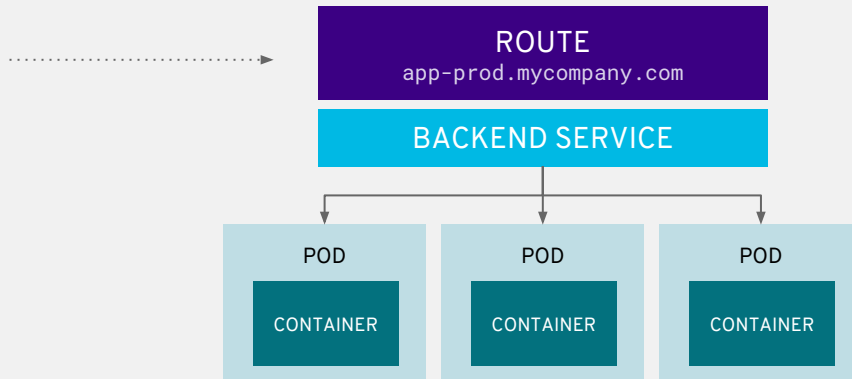

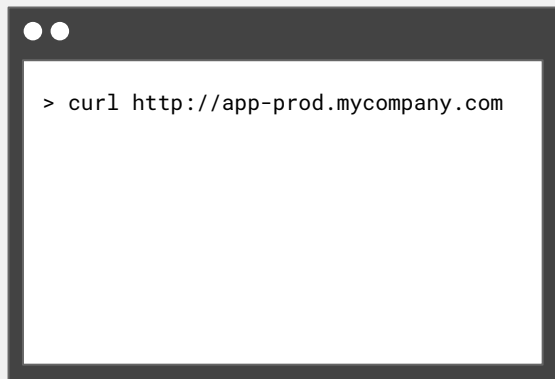

services provide internal load-balancing and service discovery across pods

apps can talk to each other via services

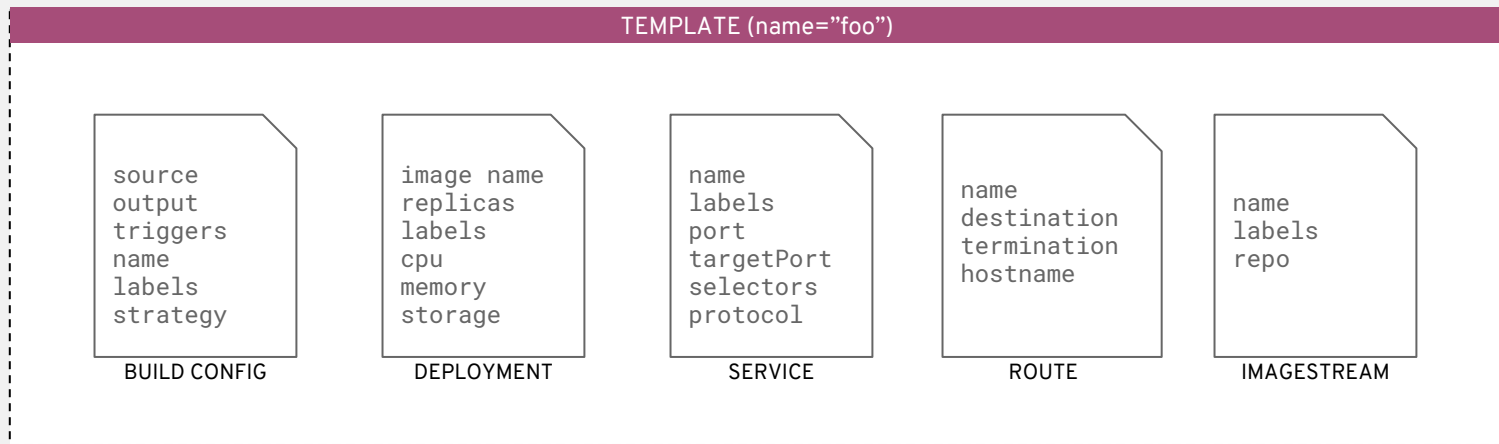

routes add services to the external load-balancer and provide readable urls for the app

projects isolate apps across environments,
teams, groups and departments

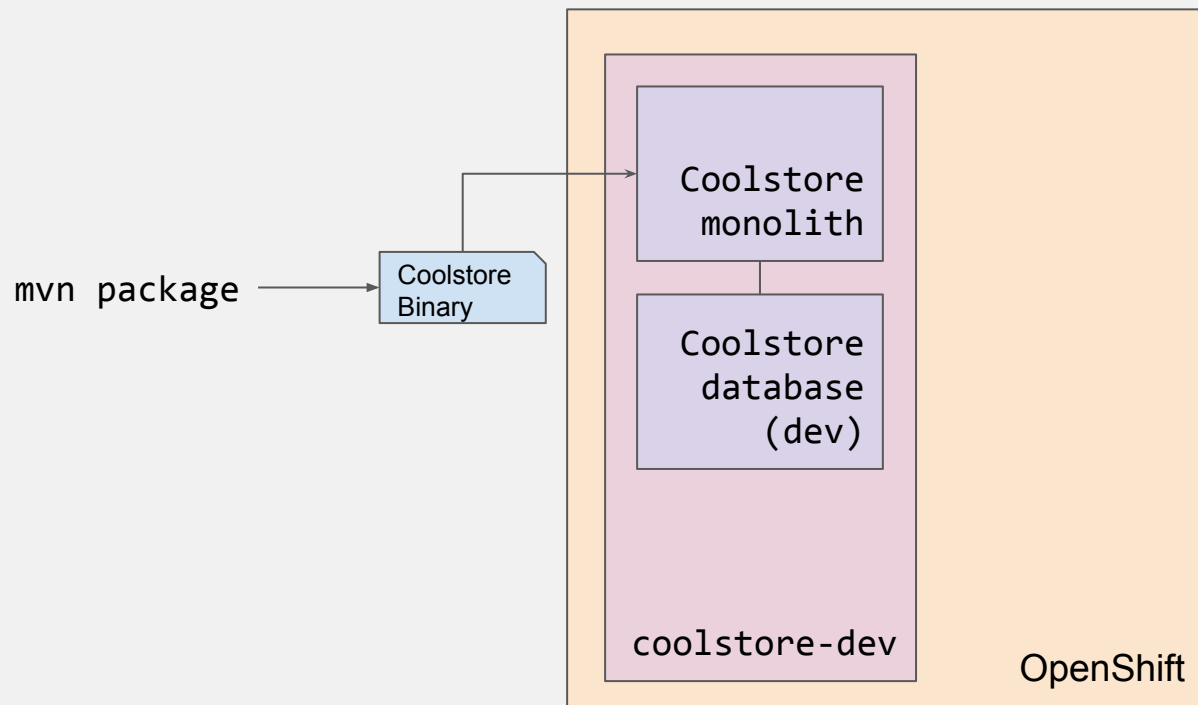

templates define a blueprint for an application that can be instantiated within a project

\$ oc new-app foo

LAB: DEVELOPER INTRODUCTION TO OPENSHIFT

CURRENT STATE

GOAL FOR LAB

In this lab you will learn:

- Important OpenShift concepts for developers
- How OpenShift makes developers and architects happier
- How to do efficient round-trip development:
 - Separate **dev** from **prod** environments
 - Quick deployments using **rsync** / port-forwarding
 - Promoting apps using **CI/CD Pipelines**

LAB: DEVELOPER INTRO TO OPENSIFT

A man with white hair, wearing a light-colored lab coat and dark safety goggles, is holding a pair of pliers in both hands. He is looking directly at the camera with a focused expression. The background is slightly blurred, showing what appears to be a workshop or laboratory setting with various tools and equipment.

SCENARIO 3

A DEVELOPER INTRODUCTION TO OPENSIFT

WRAP-UP AND DISCUSSION

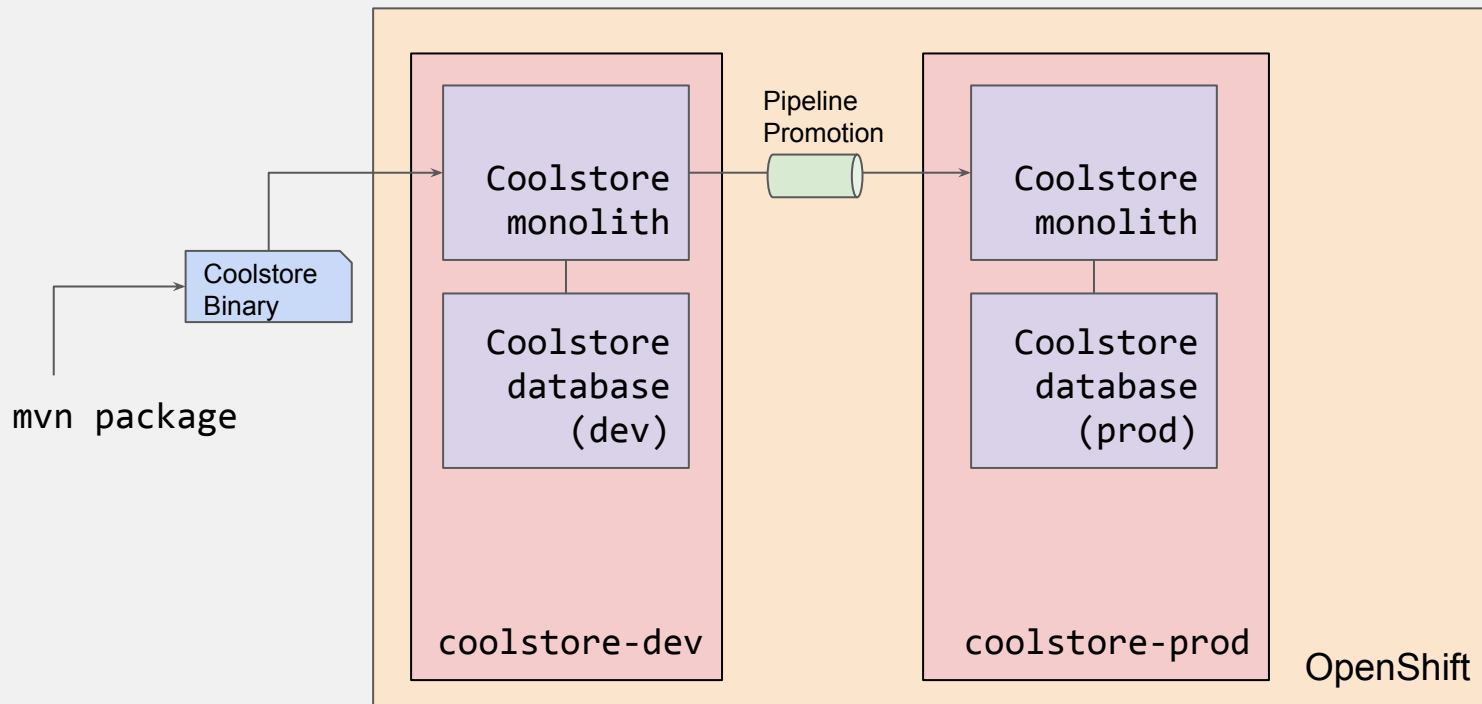

RESULT OF LAB

In this lab you learned how to:

- Do quick deployments with `oc rsync`
- Create a production environment separate from dev
- Promote tested/verified builds between environments using OpenShift pipeline builds

You should now have two projects (dev and prod) running the same CoolStore app! In the next lab we will begin the process of breaking the monolith up into microservices.

DESIRED RESULT OF SCENARIO 3

Interactive Learning Portal

Our Interactive Learning Scenarios provide you with a pre-configured OpenShift instance, accessible from your browser without any downloads or configuration. Use it to experiment, learn OpenShift and see how we can help solve real-world problems.
