

PART 3: MONOLITHS TO MICROSERVICES WITH MICROPROFILE AND SPRING BOOT

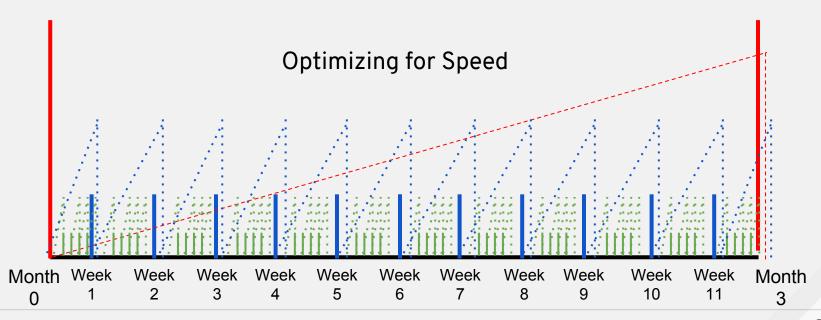

WHY MONOLITH TO MICROSERVICES

Break things down (organizations, teams, IT systems, etc) down into smaller pieces for greater parallelization and autonomy and focus on reducing time to value.

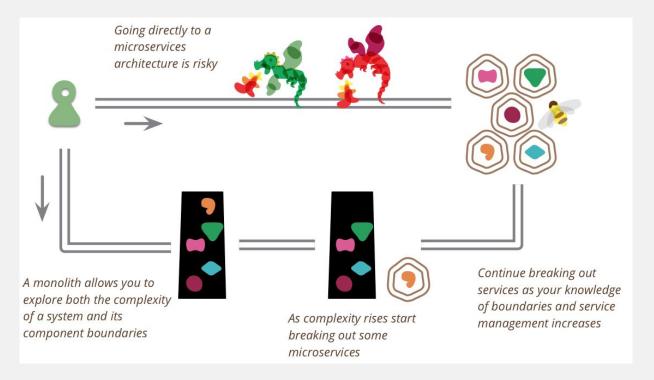

REDUCING TIME TO VALUE

Monolith Lifecycle
Fast Moving Monolith
Microservices

Monolith First?

http://martinfowler.com/bliki/MonolithFirst.html

THE BIGGER PICTURE: THE PATH TO CLOUD-NATIVE APPS

A DIGITAL DARWINISM

RE-ORG TO DEVOPS

SELF-SERVICE ON-DEMAND INFRA

AUTOMATION CONTINUOUS DELIVERY

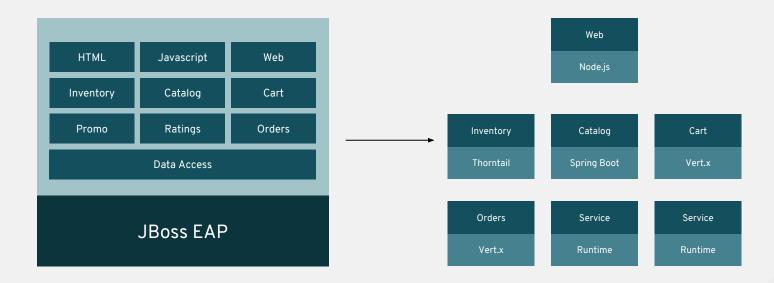

ADVANCED DEPLOYMENT TECHNIQUES

FAST MONOLITH

STRANGLING THE MONOLITH

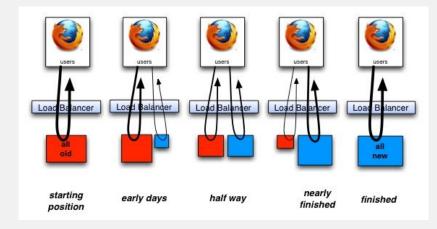

- In this lab, you will begin to 'strangle' the coolstore monolith by implementing its services as external microservices, split along business boundaries
- Once implemented, traffic destined to the original monolith's services will be redirected (via OpenShift software-defined routing) to the new services

STRANGLING THE MONOLITH

- Strangling incrementally replacing functionality in app with something better (cheaper, faster, easier to maintain).
- As functionality is replaced, "dead" parts of monolith can be removed/retired.
- You can also wait for all functionality to be replaced before retiring anything!
- You can optionally include new functionality during strangulation to make it more attractive to business stakeholders.

Time _____

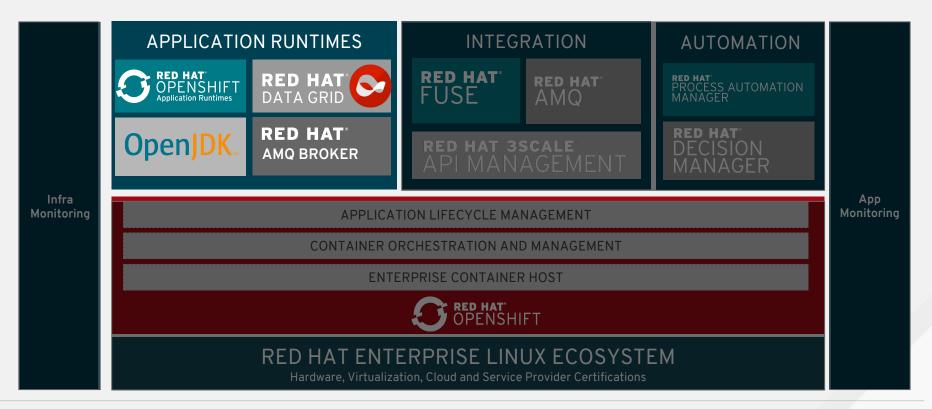

RED HAT® APPLICATION RUNTIMES

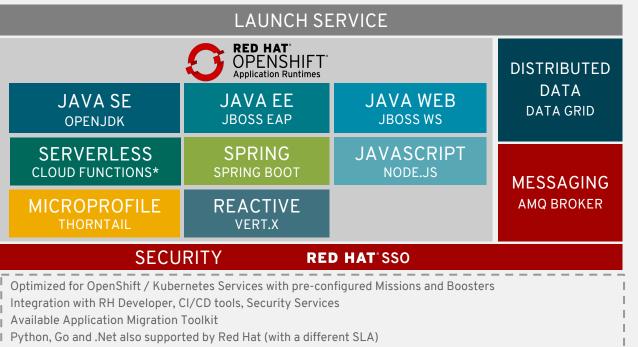

RED HAT PLATFORM FOR THE HYBRID CLOUD

OPENSHIFT AND MIDDLEWARE OPTIMIZED FOR THE CLOUD

RED HAT APPLICATION RUNTIMES

NON-RESTRICTIVE DEVELOPMENT FOR THE HYBRID CLOUD

Facilitate cloud native app development ON THE HYBRID CLOUD:

- ✓ Faster getting started
- ✓ Simplify container dev
- ✓ Automate DevOps
- ✓ Standardize tools/processes
- ✓ Fully supported JDK

ENTERPRISE JAVA

RED HAT' JBOSS' ENTERPRISE APPLICATION PLATFORM

JAVA MICROSERVICES

REACTIVE SYSTEMS

SERVLET APPS

JAVASCRIPT FLEXIBILITY

TOMCAT SIMPLICITY

RED HAT JBOSS WEB SERVER

SPRING

- Microservices for Developers using Spring Framework
- An opinionated approach to building Spring applications
- Historical alternative to Java EE
- Getting started experience
- Spring MVC / DI / Boot most popular

Spring in RHOAR

- It's the same Spring you know and love
- Tested and Verified by Red Hat QE
 - Spring Boot, Spring Cloud Kubernetes, Ribbon, Hystrix
- Red Hat components fully supported
 - Tomcat, Hibernate, CXF, SSO (Keycloak), Messaging (AMQ), ...
- Native Kubernetes/OpenShift integration (Spring Cloud)
 - Service Discovery via k8s (DNS), Ribbon
 - Spring Config via ConfigMap
- Developer Tooling (launch.openshift.io, starters)
- Additional planned support for
 - Transactions (Narayana), Messaging (Rabbit MQ -> AMQ), more

Cloud Native Support in Spring

- Health Checks (actuator)
- Externalized Config (spring-cloud-kubernetes)
- Client-side discovery / load balancing (Eureka/Kubernetes)
- Circuit Breaking / Bulkheading (Hystrix)
- Logging / Monitoring / Tracing / Metrics
- Secure deployments with Keycloak
- API Documentation (Swagger)

THORNTAIL (née WILDFLY SWARM)

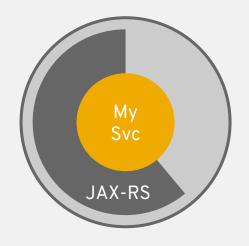

THORNTAIL

Java EE microservices

- Leverage Java EE expertise
- Open standard
- Microservices focus
- Optimized for OpenShift
- Super lightweight
- Tooling for Developers

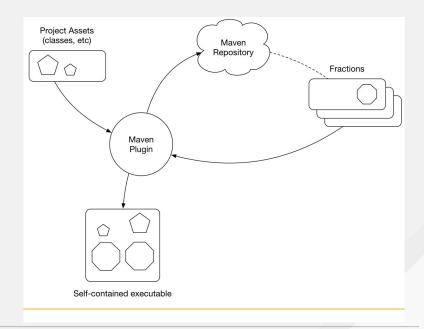

\$ java -jar my microservice.jar

Thorntail "pieces" - Fractions

- A tangible unit providing a specific piece of functionality
- Embodied in a maven artifact
- To support the compositional aspect in Thorntail
- Provides the "runtime" capabilities
- Means to add API dependencies (e.g. JAX-RS)
- Means to configure the system
 - With reasonable defaults
- Means to discover other components (topology)
- Means to alter deployments (e.g. keycloak)
- Can be auto-detected or explicitly declared

Cloud Native Support in Thorntail

- Health Checks
- Externalized Config
- Client-side discovery / load balancing
- Circuit Breaking / Bulkheading
- Logging / Monitoring / Tracing / Metrics
- Secure deployments with Keycloak
- MicroProfile MICROPROFILE
- API Documentation

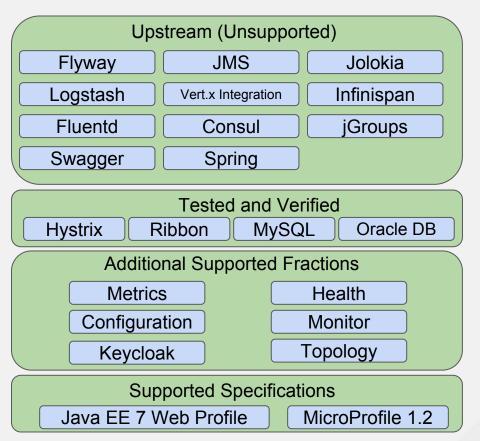

Build microservices

- Embeddable (Fat Jar)
- Lightweight
- Modular & extensible
- Built from WildFly (Trusted and Reliable)

Thorntail and RHOAR

- Defines open source Java microservices specifications
- Industry Collaboration Red Hat, IBM, Payara, Tomitribe, London Java Community, SouJava, Oracle, Hazelcast, Fujitsu, SmartBear...
- Thorntail is Red Hat's implementation
- Minimum footprint for Enterprise Java cloud-native services (v2.0):

JSON-P 1.1	JSON-B 1.0	Health Check 1.0	JWT Propagation 1.1	Config 1.3	OpenAPI 1.0
CDI 2.0	JAX-RS 2.1	Fault Tolerance 1.1	Metrics 1.1	Open Tracing 1.1	Rest Client 1.0

LAB: MONOLITHS TO MICROSERVICES WITH MICROPROFILE AND SPRING BOOT

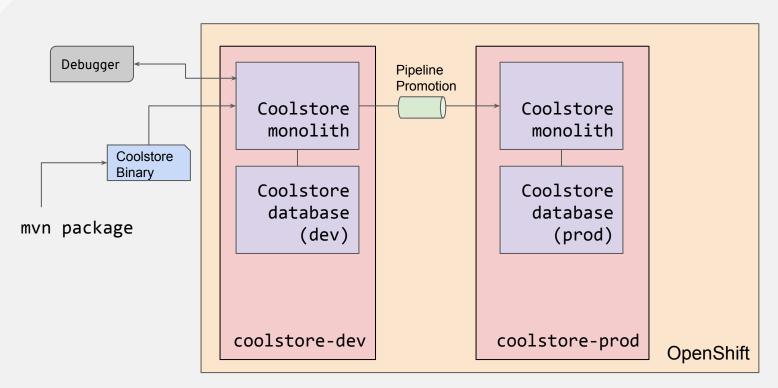

GOAL FOR LAB

In this lab you will learn:

- How Red Hat OpenShift and Red Hat OpenShift Application Runtimes (RHOAR) help jumpstart app modernization
- Benefits and challenges of microservices
- How to transform existing monolithic applications to microservices using <u>strangler pattern</u> and <u>12-factor app</u> patterns.
- Use modern app dev frameworks like <u>Thorntail</u> and <u>Spring</u>
 <u>Boot</u> to implement microservice applications on OpenShift

CURRENT STATE - THE MONOLITH

LAB: MONOLITHS TO MICROSERVICES WITH JAVA EE AND SPRING BOOT

WEB: bit.ly/RH-MS-lab-guides
SLIDES (PDF): bit.ly/RH-MS-lab-slides

SCENARIO 4 TRANSFORMING AN EXISTING MONOLITH (PART 1)

SCENARIO 5 TRANSFORMING AN EXISTING MONOLITH (PART 2)

WRAP-UP AND DISCUSSION

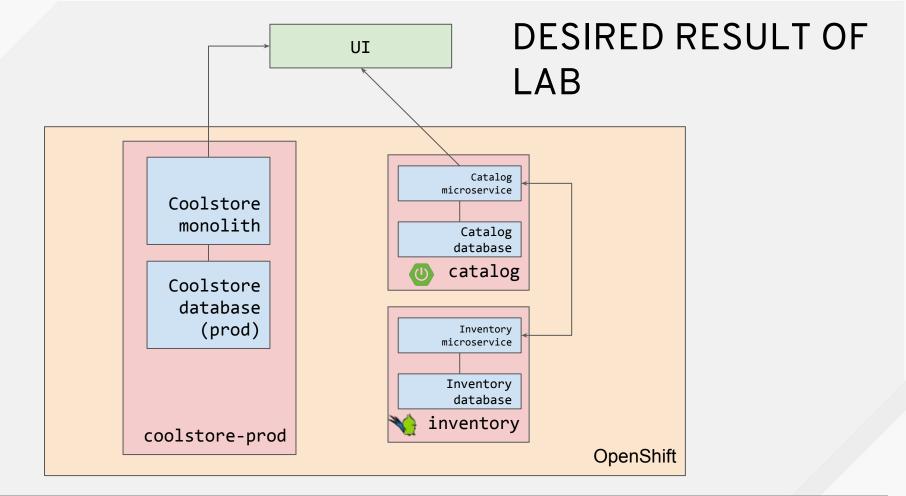

RESULT OF LAB

In this lab you learned how to:

- Implement a Java EE microservice using Thorntail
- Implement a Java EE microservice using Spring Boot
- Develop container-based testing
- Add microservice concerns like Health checks, externalized configuration and circuit breaking
- Use the strangler pattern to slowly migrate functionality from monolith to microservices
